

Better Homes Brand guidelines

A modern construction company for London homes

Build the brand around a beautifully finished home and a well-managed building experience. Use calm, architectural design to make the quality visible, and specific evidence to make the service credible.

Existing Better Homes portfolio image • Rear extension and whole-home renovation in N19 [L5]

Prepared for Better Homes • 7 September 2026

Scope: positioning, ideal clients, visual identity, typography, colour, language, customer experience, competitor research and website priorities. Recommendations are exploratory; no website changes have been made.

The brand to build

Better Homes should be the construction company that design-conscious London homeowners trust to manage a substantial renovation with care. The premium is earned through visible workmanship and disciplined delivery, expressed in a warm, contemporary identity.

Positioning statement

For London homeowners extending, converting or renovating a home they intend to enjoy for years, Better Homes delivers carefully built spaces through clear pricing, reliable project management and close coordination with the right design professionals.

The promise

A better home. A well-managed build.

This is the recommended messaging line, not a guarantee of a disruption-free project. The brand should explain how decisions, costs, progress and aftercare are managed.

Pillar	What the customer gains	Evidence to show
Careful delivery	Confidence that the work is being managed	Named project lead, programme, weekly update example
Clear commercial decisions	Understanding of scope and changing costs	Itemised quote, inclusions, exclusions, written variation process
Quality that can be seen	A home finished to a considered standard	Real project details, construction photographs, snagging record
Support after handover	A clear route for questions and defects	Scope-specific workmanship terms and aftercare contact

The boundaries

Lead with extensions, loft conversions and whole-home renovations. Kitchens and bathrooms support these larger projects. Do not present new-build experience or standalone interior design as Better Homes services. Architectural services are delivered by external professionals, not an employed in-house architect.

Basis: owner brief; current site and implementation reviewed on 7 September 2026. Pillars and service practices are recommendations unless already substantiated.

Ideal customer profile

The primary client is a high-income London homeowner who values a modern, well-resolved home and wants professional help managing the work. Interpret “relaxed” as collaborative and comfortable delegating once trust is earned. Calmness is partly a result of a good process, not a qualification to demand from a client.

Dimension	Primary client	Secondary client
Project	Extension or loft with wider alterations	Whole-home renovation after purchase or before moving in
Motivation	Stay in a loved area; improve space, light and everyday living	Make an existing property work as a coherent long-term home
Decision style	Thoughtful, quality-aware; values a clear recommendation	Time-constrained; wants coordination and a manageable decision schedule
Main anxieties	Cost drift, delays, disruption and finish quality	Who is accountable, missing scope and decisions made too late
Best reassurance	Comparable local project plus detailed delivery explanation	Named lead, scope breakdown, agreed communication and aftercare

Geographic focus

Core coverage: Central, North and East London; selected South London projects. Suggested campaign clusters are Islington and Highbury, Crouch End and Muswell Hill, Hackney and Stoke Newington, and Wanstead and Leytonstone. These are targeting hypotheses, not assertions of completed work in every area. Prioritise places where access, project economics and actual references support delivery.

Qualify by project readiness

Ask about postcode, project type, ownership or purchase stage, drawings and approvals, investment range, intended start window and who will make decisions. Confirm whether the budget covers construction alone or also professional fees, VAT, finishes and contingency. Offer a route for clients who do not yet know their budget.

No minimum project value was provided. Set service-specific qualification bands using recent accepted quotes, gross margin, crew capacity and lead conversion before publishing a threshold. Do not replace the current prices with invented premium figures.

These customer profiles are strategic hypotheses derived from the owner brief, not survey or CRM findings. Review against the next 20 qualified enquiries.

Design and build with clarity

Keep the convenience of a coordinated service while making the professional relationships explicit. The current “One team. One contract.” wording may be appropriate for some contractual arrangements, but the supplied operating model alone does not establish that promise. [L1, L2]

Recommended public wording

“We build extensions, loft conversions and whole-home renovations across London. If you need an architect, we can introduce one we recommend and coordinate closely with them throughout the project.”

“Already have an architect? We can work with your existing team.” Use this second sentence only if Better Homes accepts this route operationally.

Stage	Better Homes role	Design professional role
Brief and feasibility	Discuss scope, construction route and initial budget assumptions	Assess design options and professional scope if appointed
Design and approvals	Coordinate buildability, cost input and information needed for construction	Provide agreed drawings and submissions under their appointment
Preconstruction	Develop scope, exclusions, programme and quotation	Resolve design information within their agreed scope
Construction	Manage site delivery, sequencing, updates and changes	Answer design queries and inspect if their appointment includes it
Handover	Snagging, records and agreed workmanship aftercare	Supply relevant professional documents within their appointment

Explain this before a client commits

The proposal should name each appointed party, who pays them, what they deliver and how decisions travel between the client, architect and builder. Confirm responsibility for structural design and specialist surveys too. Do not imply architects, surveyors or engineers are employees.

Until the contractual model is confirmed, use “construction and design coordination” or “design and build with recommended architects”. Avoid “everything in-house”, “our architects” and universal claims of one contract or no handoffs.

This is brand and service communication guidance. The actual appointments govern responsibilities; this document does not define or amend contract terms.

Current website and code audit

The website contains the ingredients of a credible premium brand, but several systems and messages compete. Preserve the useful evidence and tools while simplifying the presentation. Desktop pages were inspected visually; the code review focused on public brand surfaces, not application security or a full technical audit.

Observed now	Effect on the brand	Recommended change
Satoshi body; Inter imported on the root element [L3]	Two font sources complicate consistency	Use Satoshi deliberately across public pages; remove redundant loading after route checks
Blue #266BF1, purple #7421FC and violet text #100B47 [L2–L4]	Feels promotional and visually fragmented	Adopt one semantic palette and shared component styles
Heavy heading weights, pills, shadowed floating navigation [L4]	A busy first impression competes with the work	Use medium-weight headings, flatter navigation and quieter controls
Five equal service cards, including kitchens and bathrooms [L1]	Smaller work dilutes the three core offers	Lead with extensions, lofts and whole-home renovation
Project photos and linked reviews already exist [L5, L6]	Strong foundation for trust	Bring two relevant projects and one specific review earlier
Generic Twitter destination; old brand email in config [L2, L7]	Inconsistent identity at contact touchpoints	Validate destinations and standardise public display names and email routes

Correct factual consistency before visual polish

The homepage extension card starts at £50,000 while its FAQ says around £80,000; kitchen and bathroom starting figures also differ. The hero says “10-year guarantee”, but the guarantee component separates 10 years for extensions and lofts, 2 for kitchens and bathrooms, and 1 for decorating. Align each statement with current scope and terms. [L1, L8]

Review “500+ projects”, the exact insurance description and all star ratings against source records. A statement being in the code or on the website is not independent verification.

Direct competitor comparison

The strongest public presences in this reviewed set combine attractive work with useful decision support. The table compares four direct London competitors. “Strongest” is an editorial assessment of visible presentation, project evidence, service clarity and enquiry support; it is not a ranking of revenue, traffic, search share or build quality.

Competitor and fit	Visible brand and online strengths	Lesson for Better Homes
Plus Rooms plusrooms.co.uk Extensions and lofts Best overall extension benchmark [S1]	Immersive project imagery; restrained wordmark with red accent; location-labelled portfolio, cost calculator, ideas library and linked social channels.	Build project-led service and location journeys. Show the completed home early and keep cost planning available without letting it dominate the first impression.
We Love Build welovebuild.co.uk Renovations, extensions and lofts Best premium visual benchmark [S2, S3]	Minimal emblem and navigation; large residential photography; dedicated Method page, local project stories and an active-looking editorial section.	Pair architectural photography with a clear delivery method. Distinguish Better Homes through concrete project-management evidence rather than broad transparency language.
Build Team buildteam.com Extensions and lofts Best decision-support benchmark [S4]	Light wordmark, oversized type and project imagery; calculator, design packages, case-study downloads, house tours and 3D tours.	Keep the calculators and add credible project walkthroughs. Avoid the intrusive consultation overlay observed during this visit.
Simply Extend simplyextend.co.uk House and kitchen extensions Strong specialist conversion benchmark [S5]	Red graphic identity; service and area content, local case studies, enquiry routes, warranty message and a route for clients with existing plans. Links to sister brand Simply Loft.	Make project routes and client responsibilities easy to understand. Borrow service clarity while using a quieter visual treatment suited to the desired premium audience.

Research snapshot: 7 September 2026. Competitor statements are self-published. Social links were observed; follower counts, engagement, paid media and independent review totals were not audited. Sources are linked in the reference section.

What to learn from the best

Lead with Plus Rooms and We Love Build

Plus Rooms is the clearest reference for presenting an extension portfolio as the centre of the brand. We Love Build is the closest visual reference for the warm, modern renovation company Better Homes wants to become. Neither visual polish nor their stated delivery approach proves commercial performance. [S1–S3]

Use Build Team for practical reassurance

Build Team provides several ways to understand a project before enquiring, including tours and tools. Better Homes already has calculators, so the next investment should be improving continuity between an estimate, a comparable project and a consultation. More tools are not automatically the priority. [S4; L1]

An adjacent premium benchmark

Brand	Why include it	What to borrow and avoid
Huntsmore huntsmore.com [S6]	Adjacent rather than like-for-like: architecture, interiors and project management for period homes, with tightly defined West London neighbourhoods.	Borrow material-focused photography, a restrained wordmark and precise geographic positioning. Avoid implying Better Homes offers the same professional services. A visible technical warning at the top of its homepage weakened an otherwise polished impression.

The opportunity for Better Homes

“Transparent”, “managed” and “design and build” are common promises across this group. Better Homes can make those promises more tangible by showing the actual weekly update, the process for agreeing changes, named responsibility and scope-specific aftercare. Couple that evidence with equally strong photography.

Avoid copying category habits

Large images should not hide what you do. Rotating heroes, thin white text over photographs, repeated “leading” claims and layers of pop-ups create friction. Prefer a stable hero, a readable message and one clear next action. These are design recommendations based on the reviewed pages, not conversion-test results.

Explore three visual directions

A substantial change is justified, but the existing Satoshi typeface and geometric identity provide useful continuity. Explore the following routes, then develop the recommended route consistently across the website, proposals and site materials.

Direction	Visual ingredients	Fit and tradeoff
Warm architectural Recommended	Chalk, deep green-black, olive and a restrained clay accent. Satoshi 400/500/700. Natural daylight and honest material detail.	Balances high-end presentation with an approachable construction business. Needs strong real photography to avoid looking like a generic interiors brand.
London editorial Alternative	Off-white, ink and stone; Satoshi with a limited Instrument Serif display accent. Generous space, captions and composed project stories.	More expressive and residential. Serif use should remain occasional so the brand still feels like a capable builder.
Precise modern Continuity option	White, charcoal and a reduced deep-blue accent. Satoshi, strong grids and technical project details.	Retains more of the current blue identity. Easier transition, but less distinctive from service and software brands.

Recommended creative principle

Make the home feel inviting and the company feel organised. Use a warm base, crisp alignment and quiet controls; let real spaces and careful construction details supply the character.

				
Ink #202925	Chalk #F4F1EA	Olive #4D5B4B	Stone #D8D2C6	Clay #A65B43

Proposed Warm architectural palette. These are new specifications, not colours sampled from a competitor. Satoshi is already present in the codebase. Instrument Serif is an optional exploration, not part of the recommended core system. [L3; S7, S8]

Colour system

Colour	Digital value	Role and suggested share
Chalk	HEX #F4F1EA RGB 244 241 234	Main background; about 60% of non-photographic area
Ink	HEX #202925 RGB 32 41 37	Body text, wordmark and strong blocks; about 20%
Stone	HEX #D8D2C6 RGB 216 210 198	Supporting surfaces and quiet dividers; about 10%
Olive	HEX #4D5B4B RGB 77 91 75	Primary buttons, selected states and small accents; about 8%
Clay	HEX #A65B43 RGB 166 91 67	Occasional editorial detail; about 2%, not a second CTA colour

Approved text pairings

Calculated contrast ratios for solid colours: Ink on Chalk 13.25:1; Olive on Chalk 6.39:1; White on Olive 7.21:1; Ink on Stone 9.93:1. These meet the 4.5:1 minimum for normal text. [S9]

Stone on Chalk is only 1.33:1: use it decoratively, not for readable text or a control boundary that must be distinguishable. Clay on Chalk is 4.43:1, below the normal-text minimum. Use Clay decoratively or for large text only; verify any changed pairing.

Use white only where it improves function, such as input fields and reversed button labels. Add a clear focus outline and a written error message; colour alone must not carry meaning. Avoid gradients, metallic effects and gold as a shortcut for luxury.

Print: HEX and RGB are the source specifications. Ask the printer to convert using the actual paper and press profile and approve a physical proof. No unverified CMYK or Pantone match is prescribed.

Typography

Retain Satoshi as the core typeface. It already fits a modern, approachable company; the improvement is its use. Replace routine 900-weight display text with 500-weight headings and a calmer hierarchy. Reserve 700 for short emphasis and controls. [L3, L4; S7]

Role	Desktop / mobile	Weight and line height
Hero heading	64 / 40 px	500; 1.05–1.10; tracking about –0.02em
Section heading	40 / 30 px	500; 1.15
Card heading	24 / 22 px	500 or 700; 1.25
Body and lead	18 / 17 px	400; 1.55–1.65
Navigation and buttons	16 / 16 px	500 or 700; 1.25–1.4
Captions and labels	14 / 14 px	400 or 500; 1.45

Use sentence case for headings and buttons. Limit all caps to short eyebrow labels with modest letter spacing. Keep body lines around 55–75 characters. Avoid justified text, excessive bold and headings split across many short lines.

Web stack: Satoshi, Arial, sans-serif. Use local WOFF2 assets with documented licence provenance and only the weights needed. Satoshi files are present but the retained licence receipt was not audited. This editable report uses Arial for portability; the image above shows the actual Satoshi fonts. Install licensed Satoshi for brand-native Word templates. [S7]

Logo photography and composition

Wordmark and mark

Use the full public name Better Homes, in title case. Make a simple wordmark the primary identifier, with the existing geometric mark considered for refinement rather than discarded automatically. Its line-based form can support an architectural identity; test recognition and clarity at small sizes before commissioning a redraw.

Recommended lockups: horizontal wordmark for the website and proposals; stacked Better / Homes where width is constrained; symbol-only only for established contexts such as the favicon. The descriptor “Extensions and renovations in London” is optional and should sit separately from the primary wordmark.

Provisional rules for the next artwork stage: clear space at least one capital B height; full lockup at least 140 px digitally or 30 mm in print; symbol at least 24 px, with a simplified 16 px favicon tested separately. Supply Ink, Olive and reversed White versions. Do not stretch, outline the type, add shadows or place it on a busy photograph.

Photography

Use completed Better Homes projects, with permission and accurate location and service labels. Prioritise daylight, room proportions, material junctions and a clear connection between old and new. Include a wide view, a human-scale view and construction details for every featured project.

The N19 photograph is a useful existing asset: it shows structure, daylight and an inhabited family space. A future shoot can reduce incidental clutter through staging with the owner, while preserving the room and workmanship honestly. Do not present stock or AI-generated interiors as completed Better Homes work.

Layout and supporting graphics

Start with a 12-column desktop grid, four mobile columns and an 8 px spacing unit. Use 24–32 px gutters, a 1200–1280 px content maximum, 80–112 px desktop section spacing and 48–64 px on mobile. Treat these as design defaults, then adapt to real content.

Use rectangular project imagery, minimal borders, 4–8 px corner radii on controls and little or no shadow. Use consistent line icons only when they help explain a service. Keep decorative house outlines, repeated badge strips and animated accents out of the main reading path.

These are production rules for a future identity rollout, not a delivered final logo suite. Final artwork needs optical adjustment, small-size testing and export in SVG and print-ready PDF.

Voice and copy

Sound composed, clear and human. Describe the work and the process in specific terms. Use British English: programme, organise, colour, enquiry. “We” is Better Homes; “you” is the homeowner. Avoid jargon until the decision requires it.

Current habit	Recommended expression
“Without the usual builder chaos”	“A clear plan, regular updates and a named lead for your build.”
“Do not fret. We got you covered!”	“Know what happens next.”
“Real reviews with specifics, not vague praise”	“What our clients say.”
“Industry leading” or “more value than 95%”	Describe the actual scope, process and cover; remove unsubstantiated comparisons.
“No surprises”	“We explain the scope and agree changes before the related work proceeds.”
Generic urgency or “limited availability”	Show an accurate, maintained start window only when there is operational evidence.

Homepage draft

Eyebrow: Extensions, loft conversions and renovations in London

Headline: A better home. A well-managed build.

Supporting copy: Better Homes builds extensions, loft conversions and whole-home renovations with clear pricing and careful project management. We work closely with recommended architects where design support is needed.

Primary action: Discuss your project. **Secondary action:** Explore our work.

Short company description

Better Homes is a London construction company specialising in extensions, loft conversions and whole-home renovations. We bring clear pricing, reliable project management and careful workmanship to the building process, coordinating with recommended architects when clients need design support.

Draft copy should be checked against actual operating practices before publication. Existing phrases above come from local source files [L1, L2, L6, L8], not a claim that all appear in every live route.

The website experience

Make the route from aspiration to confidence shorter. The first screen should explain the service, show the quality and provide one useful next step. Keep the existing calculators and source-linked reviews, but organise them around the three core project types.

Step	Homepage content	Purpose
1	Simple navigation, concise hero and one strong real project photograph	Communicate what Better Homes does and how it feels
2	One compact, source-linked review statement	Give credible reassurance without a wall of badges
3	Two or three selected projects across the core services	Demonstrate relevant experience before more claims
4	Extensions, loft conversions, whole-home renovations	Help the visitor find the right project route
5	How we work and how architects are involved	Make delivery responsibilities understandable
6	Cost planning with assumptions and calculator links	Answer investment questions honestly
7	Client experience, guarantee detail and focused FAQs	Resolve remaining objections
8	Discuss your project and concise service-area information	Turn confidence into a suitable enquiry

Navigation and enquiry

Recommended main navigation: Our work, Services, How we work, Cost planning, About, Contact. Put client sign-in in a utility position and label it “Client portal” if that accurately describes the route. Keep journal content accessible without crowding the main navigation.

Use one short project enquiry: name, preferred contact details, postcode, service, project stage, investment range including “not sure yet”, and a short brief. Explain what the first conversation covers. Ask for drawings later or through an optional secure upload. Do not promise an instant fixed quote.

Service and location pages

Each service page needs relevant completed work, typical scope, exclusions, architect route, cost assumptions, process, proof and next step. Support location pages with real local experience; do not imply every named neighbourhood has a completed project. Avoid inventing a loft case study to fill a portfolio gap.

Proof and customer experience

The clearest way to make the positioning distinctive is to show how the work is managed. Package the following as customer-facing evidence, with client permission and confidential details removed.

Touchpoint	Recommended standard	Evidence or qualification
First conversation	Discuss fit, scope, budget assumptions and next step	A consistent discovery checklist; no invented response-time promise
Proposal	Set out inclusions, exclusions, allowances and named responsibilities	A real anonymised example; explain the architect appointment
Weekly update	Work completed, next steps, decisions needed, risks and cost changes	A sample with owner and due date for each action
Changes	Written scope, price and programme impact before related work	A variation example reflecting the actual contract process
Handover	Snagging record, documents and a clear aftercare contact	Scope-specific workmanship cover and relevant product warranties
Reviews	Use accurate wording, source link and permission where required	Verify source, date, rating and review count before publishing

Strengthen the portfolio

For each featured project record the brief, location at a suitable privacy level, service, size where verified, scope, design credits, constraints, solution, completed outcome and the source of any testimonial. Add a budget band and duration only when records and client permission support them.

The local portfolio data already contains useful project structure and photographs, but its anonymous quotation for the N19 project has no review-source link in that record. Verify it or replace it with factual narrative before repeating it as a client quote. [L5]

Guarantees and trust

Preserve the distinction between a workmanship guarantee, manufacturer warranty and insurance. The current site lists different workmanship periods by service. Create one maintained source for those terms and link to it from every claim. Publish award names and years only with supporting records. [L8]

Brand applications and channels

Proposals and customer documents

Use a restrained cover, one relevant real project image, clear scope headings and readable pricing tables. Show the project address privately within the client document, the named lead, version and date. Use the same vocabulary for stages in the quote, programme, weekly update and handover pack.

Site boards workwear and vehicles

Make Better Homes readable at distance: Ink or Olive background with a reversed wordmark, a short service description and bhstudio.co.uk. Keep QR codes secondary to the written address. Use one main message, durable materials and clear contact details. Any branding on safety equipment must preserve its protective and visibility function.

Digital presence

Keep bhstudio.co.uk for continuity while standardising display names to Better Homes. Existing social handles may retain “studio” temporarily; use a consistent bio, avatar and website link. Do not change domains or create duplicate review profiles simply to match the shorter name.

Recommended social bio: “Extensions, loft conversions and whole-home renovations in London. Clear pricing. Careful project management. Explore our work.” Confirm service coverage and link to the appropriate enquiry route.

Content with a purpose

Begin with two useful posts a week if capacity allows: one completed project or detail, and one explanation of the process. Build a monthly project story for the website and reuse it in a short video, Instagram carousel and client email. Do not publish fabricated progress, stock work or generic advice solely to meet a quota.

Prioritise Google Business Profile accuracy and source-backed reviews, project-led Instagram and Houzz presentation, and practical website articles tied to the three core services. Treat LinkedIn as a secondary route for architect and professional relationships. Channel priorities are recommendations, not measured attribution findings.

Asset governance

Keep one approved folder for logos, colour specifications, fonts and licence records, photography rights, copy, review sources and document templates. Assign an owner for claims and a quarterly brand check. Retain the legal entity disclosure separately from the public Better Homes name.

Implementation priorities

Sequence the work so that accuracy and evidence support the visual change. The schedule below is a suggested rollout, subject to capacity and access to project records.

When	Action and accountable role	Definition of done
Days 1–14	Owner and commercial lead: confirm service focus, architect arrangements, price assumptions and cover	One approved claim register; contradictory prices and blanket claims identified for correction
Days 1–21	Owner and photographer: choose core projects and collect rights, facts and review links	Two or three complete, relevant case studies; a real loft project only if documented
Weeks 3–5	Designer: develop Warm architectural identity and responsive templates	Wordmark suite, colour and type tokens, homepage, service page and case-study designs
Weeks 5–8	Developer and content lead: apply templates and centralise shared content	Consistent navigation, public typography, palette, claims and enquiry copy
Weeks 8–12	Owner and marketing lead: update profiles and customer materials	Matching display names, working links, proposal and weekly-update templates
Monthly	Owner: assess enquiry quality and delivery evidence	Review project fit, consultation attendance, proposal conversion and reasons lost

Measure the intended outcome

Use qualified enquiries as the main signal. Define a qualified enquiry as a project that fits service, location, investment and delivery capacity. Track the proportion of enquiries that qualify, consultation-to-proposal and proposal-to-contract conversion, and average accepted project value. Establish a baseline before setting targets.

Also review client feedback about communication and handover. A quieter visual identity is successful when it supports better-fit enquiries and a consistent client experience, not merely because it looks more expensive.

Decisions still to make before rollout

Confirm minimum project values by service; architect appointment model; insurance and guarantee wording; which project facts and images can be published; whether the refined existing mark or a new wordmark is selected. These decisions do not prevent use of this document as an exploratory brand foundation.

Codebase handoff

No application files were changed for this document. The following implementation map turns the brand recommendations into a concrete future brief. The inspected working tree contained existing unrelated edits; those were left intact.

Location	Recommended change
app/globals.css app/layout.js tailwind.config.js	Make the public font stack deliberate. Replace legacy raw colours with semantic tokens. Review actual uses before removing Inter or changing shared styles.
config.js app/page.js	Align hero copy, metadata, main colour and service hierarchy. Reconcile all price and proof statements with approved source data.
components/hero/Hero.js components/hero/Hero.module.css	Reduce heavy headline styling, simplify proof pills and use shared button variants. Avoid forced line breaks and oversized navigation gaps.
components/navigation/Navigation.js components/footer/Footer.js	Simplify the main menu, clarify the portal route, validate social and contact destinations, and standardise public naming.
libs/portfolio-projects.js components/homepage/ HomepageTestimonialStrip.js	Require factual project fields, source-linked quotes and design credits. Surface core project types first.
components/Guarantee.js libs/pageFaqs.js libs/structuredData.js	Keep guarantees, FAQs and structured data consistent with visible approved statements. Review schema when service or brand copy changes.

Proposed public design tokens

Background #F4F1EA • Surface #FFFFFF • Text #202925

Action #4D5B4B • Subtle surface #D8D2C6 • Accent #A65B43

Use separate semantic error and focus tokens with verified contrast. Scope the initial rollout to public pages, then check the client portal before applying global changes. Preserve useful URLs and link relationships when changing navigation.

Release checks

Visually check homepage, service, portfolio, cost tools, contact and guarantee pages on desktop and mobile. Verify keyboard navigation, visible focus, text resizing, readable contrast, font loading and form feedback. Check that booking and review links open the intended destination. Do not claim improved conversion until measured.

Sources and research notes

Reviewed on 7 September 2026. Owner answers determine the service and audience brief. Live desktop inspection establishes visual observations. Local source inspection establishes implementation findings. Recommendations and rankings are the author's assessment; public claims have not been independently certified.
